

Safety Measures on Working at Height

Construction Safety Week Conference (2019)
Construction Industry Council

Dennis Ip
Projects Division, MTRC

What is the best measure to prevent them from falling?

- Scaffolds?
- Guard-rails?
- Safety belts?

- Supervision?
- Method statement?
- Risk assessment?
- System of work?

What is the best measure to prevent them from falling?

What if the workers they

- find it unsafe
- consider not worth doing it
- choose not to work there

Isn't it the best measure?

Engage the people, thank you.
